

FULL SERVICE PEST PROTECTION

Insects and Rodents are creatures of habit just like us. Weather changes will cause insects and mice to seek shelter in your home. Each season brings differing groups of invasive pests. We tailor our treatment program to combat those pests before they invade your home. We protect against roaches, spiders and other pests from entering your home in search of food, water and shelter. We keep the pests dead and outside, so you and your family can enjoy the inside.

CALL NOW TO SCHEDULE BARRIER TREATMENTS AND KEEP THE PESTS OUTSIDE WHERE THEY BELONG!!!!

TERMITE WARRANTY

Every year, more than 5 million homes in the United States are damaged by termites. The estimated cost to homeowners each year is more than the cost of tornadoes, fires and earthquakes combined.

EnviroCare utilizes traditional chemical treatments as well as the #1 brand in termite protection.

The Sentricon® System

Sentricon's patented active ingredient is delivered with bait that termites prefer even more than wood. Without detecting the threat, the workers feed the entire colony until they are eliminated. Our Certified Sentricon Specialist will install and maintain a ring of Sentricon stations around your home ensuring it is termite free.

TEAMWORK IS KEY

In order to serve you better, we need your assistance. We use high grade products that produce consistent results when coupled with proper mowing & watering habits. Complete landscape care includes not only Fertilizer, Insect and Disease Control but also proper mowing, pruning and watering practices. These maintenance activities play an even more important role in the appearance of your landscape. Our service is merely a supplement to ensure the healthy and vigor of your landscape.

During the course of our relationship, we will advise you on necessary maintenance habits to ensure you have a healthy and attractive landscape. Together, we are partners in this quest for a beautiful landscape, and we will share any information that will help us achieve that goal.

Additionally, if you ever notice a problem between applications, be sure to let us know. We will inspect your lawn and take appropriate action to correct the problem. We will also inform you of the issue and the solution so we are always on the same page.

TREE & SHRUB PROGRAM

You will receive applications throughout the year designed to stimulate growth, enhance color, and control insects and disease. We will schedule the visits to coincide with the appropriate weather to get the best results.

EnviroCare

LAWN & PEST SERVICES

LAWN CARE PROGRAM

Lawns respond best to a regular application program, spaced 4-7 weeks apart to best suit the season. Our Program will provide all necessary macro and micro-nutrients to promote strong growth and color. We will also provide Insect Control for ALL TURF-DAMAGING INSECTS.

Round 1 (Late Jan – March) This first application is a pre-emergent designed to control crabgrass before it emerges and to establish early control of broadleaf weeds.

Round 2 (March – Early May) Starter fertilization and supplemental crabgrass control to bring out good spring color and ensure continuous crabgrass control. Broadleaf weeds are treated as needed.

Round 3 (May – June) Heavy fertilization is applied to stimulate healthy color. Broadleaf weed control is added as needed.

Round 4 (June – July) A heavy fertilization with iron to maintain rich color and growth is applied with insect control as needed.

Round 5 (July – August) Natural, organic nutrients to improve root growth, color and reduce stress of your turf. Spot treat for weeds when necessary

Round 6 (Late August – October) Pre-emergent for Poa annua control is applied with other essential nutrients. Any broadleaf weeds present will be treated, also.

Round 7 (October – Mid November) Supplemental pre-emergent for poa annua control. Any broadleaf weeds present will be treated.

Round 8 (November - December) Lime is applied to adjust the pH of the soil to a healthy level for the turf. Any broadleaf weeds still present will be treated as well.

MOSQUITO CONTROL

Almost everyone has had the unpleasant experience of being bitten by a mosquito. The bites cause skin irritation through an allergic reaction to the mosquito's saliva - this is what causes the red bump and itching. But a more serious consequence of some mosquito bites may be transmission of certain serious diseases such as malaria, dengue fever and several forms of encephalitis, including West Nile Virus.

Our Mosquito Reduction Program is timed with the maturation period of mosquitoes and their larvae. These apps are spaced between March and October and average 30 days apart to ensure a lasting residual. We will target areas where mosquitos populate, which will greatly reduce the activity at your home. We use the latest techniques and equipment available to obtain a more consistent broadcast and more efficient control
